

My name is Krishnadas MD and I am a second year Electronics and Communication Engineering student. First of all I would like to convey my regards and well wishes for the upcoming initiative, DESIGNOVA. I really liked the intro video as it was of great creativity and thoughts .So now I hope and am sure that Designova is going to be a great success. Hats off to the team behind and I wish I could also be a part of it soon.

Since first year I have been a great enthusiast for IEDC and I always wanted to be a part of it. For me, IEDC is a platform for the development and growth of my visions and dreams. I am always thrilled and fond of new ideas and thoughts. Moreover, new startups have always been attracting me and am looking forward for a startup in the future. I hope IEDC can provide me the support and help me in making that happen. My skills include drawing, designing, finding solutions for problems, building up different thoughts and new ideas. I am good at communicative skills and I have been participating in debates, group discussions, JAM, extempore etc. I love public speaking and I have shown my talents in different platforms. I also have a good leadership quality and I have worked as a captain or team leader in different programs and clubs. Presently I am working as the Second Year Rep under ISTE TKMCE .

As, I told earlier about my ideas and startups, recently my friends and me had planned for starting up an online platform named 'Learn it'. It was on the building up stage, but due to some technical reasons we have temporarily stopped it. It will be restarted soon. I am also thinking of designing an app which holds information about all the students in our college. I have always wondered that we all don't know everyone in our college. So in order to know personally, this app will provide a platform for all the students to interact and know each other. This app just behaves like a TKMCE 's social media, where we can share photos of different happenings in the campus, and discuss various matters. It must also include a TKMCE map for all the students to know about different spots of our campus.Seriously,in the first year I wandered here and there so much in order to find different places.

I am learning photoshops and other softwares for the designing knowledge. My friends and me have built up a wifi -controlled bot and we have participating in competitions of Hestia & Tathva for the last two years.

So these are my skills and visions. I hope IEDC can help in building up my career as one of my future plan is to be an entrepreneur. IEDC can help me in creating

new ideas and thoughts. I hope I can give IEDC a much better future and growth in TKMCE as well as in the public.
