

Presently, I am an undergraduate student, in my second year doing my BTech in Computer Science at TKM College of Engineering, Kollam. I am a coding enthusiast and have developed an avid interest in new and cutting-edge-improvements in this field. I try to keep updated about the new reforms and innovations that surface every day. I understand that the need of the hour is to be familiar with new and cutting-edge reforms in technology. I have immense interest in the fields of Artificial Intelligence, Robotics, and the Internet of Things as well as Ethical Hacking. I aspire to be an entrepreneur in the future.

I have heard from my seniors' accounts of how different the academics and being exposed to the industry are. So, I understand the importance of moulding oneself for the industry by the time we graduate. By interning at your company, I hope I will get to experience how the industry works and work with a team under proper guidance. During this time, I hope to polish my skills and understand where my passion truly lies.

To develop my skills, I actively participate in the various activities organized by different technical organizations in my college. I have been at the forefront in the activities of clubs and organizations like IEEE (Institute of Electrical and Electronics Engineers), IEDC (Innovation and Entrepreneurship Development Cell) under the Kerala Start-up Mission, ISTE (The Indian Society for Technical Education), Coder's Club TKMCE, etc. in my college. I have worked as a student representative of IEEE SB TKMCE. Presently I am the activity coordinator of IEEE SB TKMCE and have coordinated and volunteered for various programs and competitions including IEEE's Kerala section's Travancore hub's main event which was held in my College for 2019. I was an ACM international member. I am also a FOSS Club Admin member.

I have also participated in several hackathons. My team consisting of 6 members won the Kerala reboot hackathon where we developed a system for lie detection using Machine Learning. I am also working as a green collar intern at Agrivator, a start-up company that provides agricultural solutions founded by my seniors at college. I have done mini projects involving machine learning, artificial intelligence, web designing, web development, and software development.

I have always been motivated by Tech giants and their growth. I have been inspired by the growth of companies like Tesla and SpaceX and how Elon Musk has managed the company and diversified its field of operation. I have also been highly inspired by ventures like that of Instagram and how Kevin Systrom and Mike Kreiger turned their passion for photography into a billion-dollar idea.

I aspire to work more on projects that serve socially relevant causes like that of Agrivator. Being a socially responsible person, I understand that it is my duty to give back to society.

With my experience as the activity coordinator of IEEE SB TKMCE, I hope to work better for IEDC. With the cooperation of the entire team and my management skills, I believe I can bring about new reforms, changes, and activities and make the next year more productive than this year.
